

InTec Launches Rapid HIV Self-Test Kit

InTec, a global leading IVD company specialized in infectious disease diagnostics with a focus on screening at the point of care, today announced the launch of rapid HIV self-test kit.

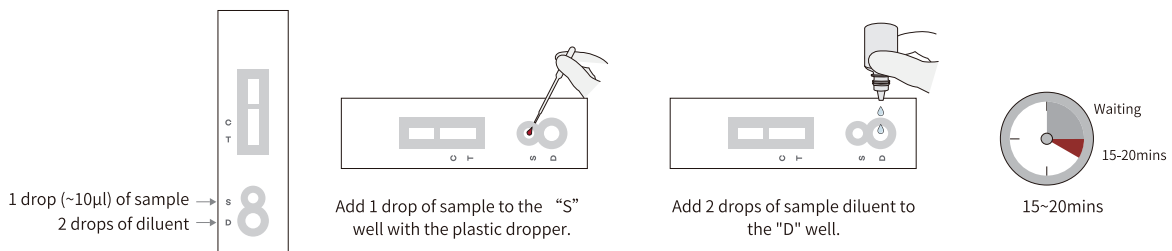

HIV testing is an act of self-care. According to the CDC, encouraging people to get tested and know their HIV status can help them stay healthy. Today, there are more easy, fast, and confidential HIV testing options available than ever before. Testing, including self-testing, is the first step to engaging in HIV prevention or treatment services. HIV testing is a critical tool to helping us end the HIV epidemic in the world.

Likened to a home pregnancy test, the InTec HIV Self-Test allows individuals to screen and monitor for HIV in the comfort of their own home, using easy-to-understand, three-step instructions. Testers collect one drop of blood using a simple fingerstick method and receive results that are highly accurate within 15 minutes.

Ending the HIV epidemic starts with testing. By providing innovative options like InTec HIV Self Test, we can help people who are unaware of their HIV status to learn the facts and make informed health decisions much faster.

■ TEST PROCEDURE

■ ORDERING INFORMATION
